

TROMMEL SCREEN

The Ultimate Mobile Trommel Screener

The RubbleCrusher TS175 Trommel Screen is a compact screening solution designed to retain maximum fines in the first passing of the screen. Ideal for testing applications, these high-performing screens ensure optimum levels of productivity with the flexibility of an easily portable tracked system.

Featuring a self-cleaning screening drum, the TS175 Trommel Screen prevents buildup of material such as wet clay or soil and keeps your mesh clear for passage. The unique lift bar system in the drum allows material to be lifted and cut more easily as it passes through the trommel. With two hydraulic-powered conveyors, users can easily separate and stockpile materials.

Adding a TS175 Trommel Screen to your inventory enables you to handle the magnitude of problems that come with processing and recycling organic material. With a compact design that containerizes without any breakdown, you can be immediately running on site in as little as 15 minutes.

Compact, mobile footprint

Transform waste into a profitable product

Increase the use of recycled material

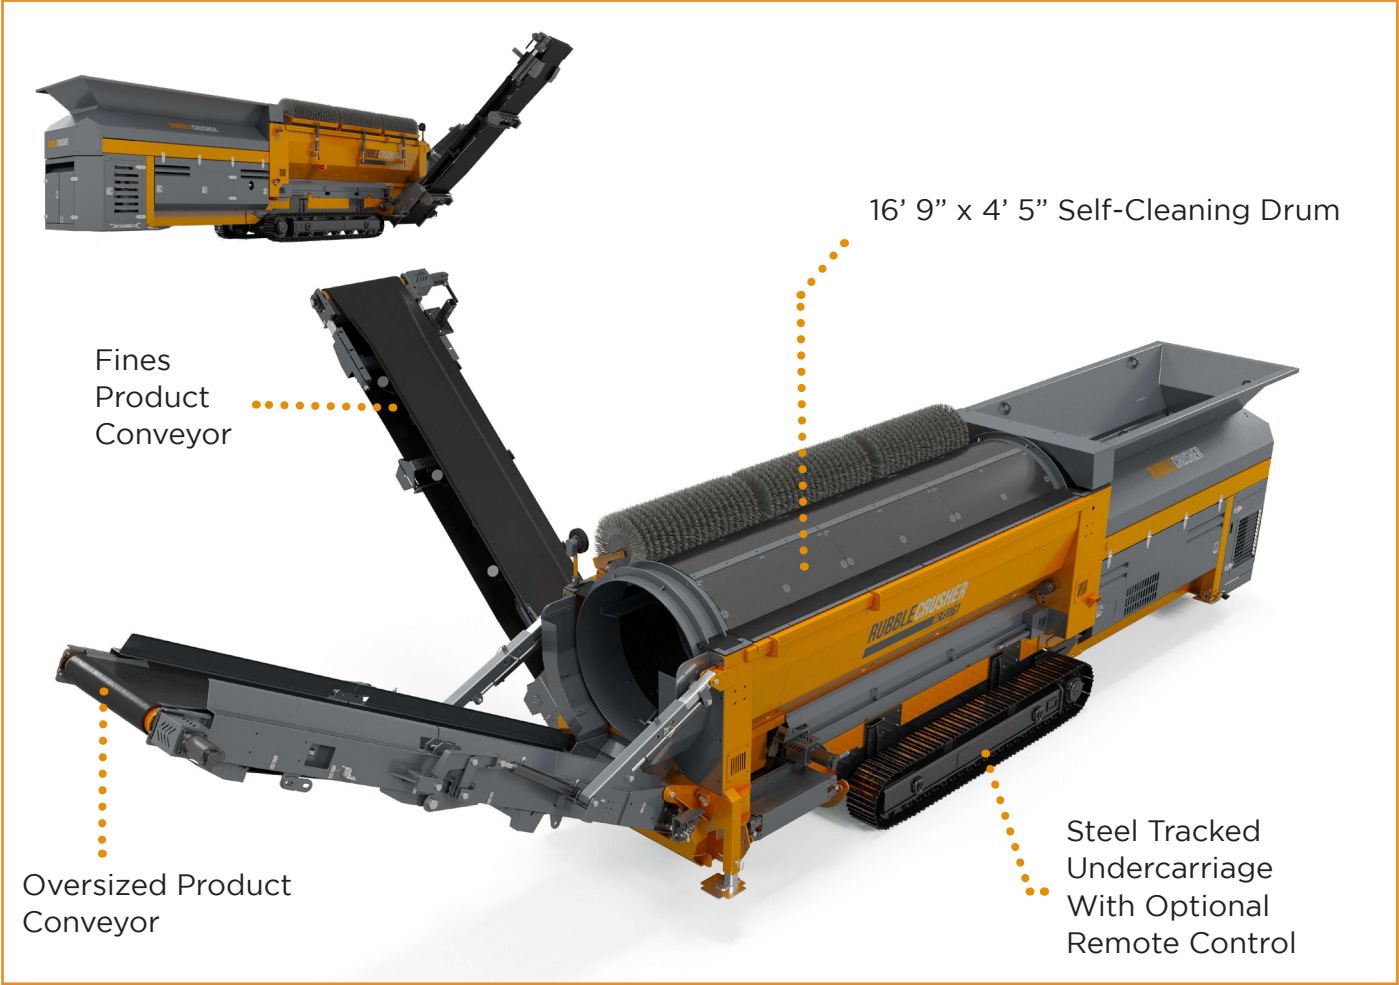

Size and sort multiple product sizes

Limit waste going to landfills
